

MERN Example Step by Step:

- 1- First Create your server
 - a. Test it with postman
 - b. Files are available in **MERN Step by Step 4 - April 2023** folder
 - i. Server1: to initiate mongoose and db hosting
 - ii. Server2: create (add)
 - iii. Server3: Read(id)
 - iv. Server4: update
 - v. Server5: delete
 - c. Refactor and use it for MERN (see the **server** folder of MERN later)
- 2- Create a folder for your MERN application
 - a. Add a separate folder for server, and copy your refactored server (above) in it
 - b. Initiate a Create-React-App (or use a template)
 - i. Get rid of unnecessary files
 - ii. Index imports Apps:
 1. Start with **App1-1** for a basic setup
 2. Then **App1-2** to read from api
 3. Then **App1-3** to implement button functions
 4. Then **App2-1** to implement Add button
 5. Then **App2-2** to implement Adding new task and also React Router
 - a. Check in browser console for creation object
 6. Then App2-3 to implement new data in MongoDB DB
 7. Finally add App3 to implement edit button too
